## **MATRIX® PRODUCT IDENTIFICATION SYSTEM**

### **PRODUCT SERIES**

10 Series MACHINE'S TOOL ACCESSORIES  
11 Series PICK-UP TOOLS  
12 Series DISPENSING TOOLS  
13 Series EJECTOR PINS AND HOLDERS  
14 Series WIRE-BOND CLAMPS  
15 Series CUSTOM / PRECISION TOOLING  
16 Series IC TESTING AND HANDLING TOOLS  
18 Series MACHINE MODULES / AUTOMATION ASSEMBLY  
21 Series RGB TO VGA VIDEO SCAN CONVERTER  
22 Series MATRIX® GLASS CERAMIC MACHINING

### **IDENTIFICATION NUMBER**

XX

**XX - XXX - XX-X**

### **PRODUCT GROUPING**

Rubber Collet  
Hi-Temp Rubber Collet  
Plastic Collet  
Delrin Collet  
Vacuum Wand Tools  
Tube Dispensing Tools  
Groove Dispensing Tools  
Hole Dispensing Tools  
Dispensing Tools  
Epoxy Stamping Tools  
Carbide Die Collet  
Ejectors Pins  
Ejector Pins / Coated  
Wire-Bond Clamps  
Pull Test Pins  
Shear Test Pins  
Electrode Torch  
Adjustable Arms  
Ejector Pins Holder  
Rubber Collets Shank  
Surface Mount Tools  
Plastic Collet Adaptors

### **REVISION NUMBER**

1 to 9

We design, manufacture and supply precision tooling and consumables through the application of state-of-the-art CAD/CAM systems and advanced manufacturing technologies. You are assured of innovative solutions delivered to you on time and at competitive prices.

Do visit us at [www.matrixtech.com.sg](http://www.matrixtech.com.sg) for more information.

WIRE BOND CLAMPS

DISPENSING TOOLS

HEATER BLOCK

MATRIX GLASS CERAMICS

COPPER CAP SCREWS

## 10 Series – Machine's Tool Accessories

### CAP SCREWS – BLACK (HEX RECESS SOCKET HEAD)

#### A. SPECIAL SELECTED ALLOY MATERIAL AND CALIBRATED HARDNESS

Our alloy screws material are specially selected and treated to a desirable hardness whereby the screws will not break easily during wire bonding. These cap screws are able to withstand torque force of more than 4.0 kgf-cm.

### B. SPECIFIED PLATING

A specified minimum layer of ZINC is introduced over our alloy screws to maintain consistency in bonding impedance. The cap screw has to be replaced once it is used.

### C. ENGAGEMENT LENGTH

Sharp corners and special engagement length are carefully studied and tested for maximizing the gripping contact between the screws and the torque wrench. Customers are advised to tighten the cap screws at 2.0 kgf-cm with the torque wrench. Please contact us for suitable driver bit and torque wrench.

#### D. ENDORSEMENT

Our cap screws are tested and recognized by a reputable wire-bond machine supplier and used by customers worldwide.

[illegible]

Please contact us for other machine models not shown above.

Note: Copper, Nickel, Gold Plating & Teflon Coating is also available, do contact us for more information.

## 10 Series – Machine's Tool Accessories

### CAP SCREWS – BLACK (TORX® 7 SOCKET HEAD)

#### A. SPECIAL SELECTED ALLOY MATERIAL AND CALIBRATED HARDNESS

Our alloy screws material are specially selected and treated to a desirable hardness whereby the screws will not break easily during wire bonding. These cap screws are able to withstand torque force of more than 4.0 kgf-cm.

### B. SPECIFIED PLATING

A specified minimum layer of ZINC is introduced over our alloy screws to maintain consistency in bonding impedance. The cap screw has to be replaced once it is used.

### C. TORX® ENGAGEMENT

To prevent operators/technicians using an allen key to tighten the capillary transducer when torque wrench is not available. Usually a lot of production downtime and cost are lost while setting up a new capillary transducer horn when the cap screws ceased or broken. Customers are advised to tighten the cap screws at 2.0 kgf-cm with the torque wrench.

#### D. ENDORSEMENT

Our cap screws are tested and recognized by a reputable wire-bond machine supplier and used by customers worldwide.

[illegible]

Please contact us for other machine models not shown above.

Note: Copper, Nickel, Gold Plating & Teflon Coating is also available, do contact us for more information.

## 10 Series – Machine's Accessories

### CAP SCREWS (TORX® 7 MALE SOCKET HEAD)

## TORX® / TORX PLUS®

**The main benefits of Torx Plus® drive are as follows**

**Straight sidewalls**  
The straight, vertical sidewalls of the TORX PLUS® Drive **virtually eliminate camout**. Also, the TORX PLUS® recess completely encloses the drive tip, **reducing tool slippage** as well as costly and unsightly damage to the fastener and surrounding surfaces.

**Elliptically-based geometry and lobe engagement**  
The elliptically-based geometric configuration of the TORX PLUS® Drive **maximizes engagement between driver and fastener**. It spreads driving forces over the surface area, extending tool life.

**0° Drive angle**  
The TORX PLUS® Drive is the only drive system designed to ensure optimal torque transmission, and, as a result, required clamp load. With a true 0° drive angle, the TORX PLUS® Drive virtually eliminates the radial stress that can cause stress on fastener recesses.

0° Drive angle

**Broad Contact surface and larger Cross-sectional area at lobes**  
Ergonomic studies demonstrates that the TORX PLUS® Drive can reduce fatigue and muscular stress during the assembly of fasteners. That is because little or no end load is required to keep the driver engaged in the recess.

little or no end load required

## 10 Series – Machine's Accessories

### CAP SCREWS (TORX® 7 MALE SOCKET HEAD)

#### Why other drive system causes problems in the assembly line

##### HEX

- Point contact causes stress risers to develop, which damages driver bit and fastener recess
- 60° drive angle is inefficient in transferring torque

##### CRUCIFORM

(includes Phillips, ACR® Phillips II and Pozidriv®)

- Camout, which forces the drive tool out of the recess, is common
- Camout and its limit on torque transfer can prevent a fastener from being fully sealed
- Excessive end-load, required to prevent camout, can reduce bit life and cause worker fatigue and injury
- Camout and tool/recess wear can create debris in an application

##### TORX® DRIVE

- Allows higher torque transmission
- 15° drive angle still permits a small amount of radial stress, which can reduce bit life
- Tool may be difficult to align properly in high-speed assemblies

## 11 Series - Pick Up Tools

### ROUND RUBBER COLLETS AND RUBBER COLLET SHANKS

**Type of Tool:** 11-XXX-000

**Material:** 1) Body – Stainless Steel, 2) Tip – NBR Rubber

#### Application:

To pick and place the silicon chips in die-bonding process. The tip is made of NBR rubber material to replace carbide die collets, delrin plastic and other hard surface pick-up tools. It is available also in Square and Rectangular designs.

**Delivery:** Ex-Stock

**Packing:** 10 pcs per bag. **Minimum order:** 100 pcs.

Please specify the ordering code as follows: **11-030-045**

## 11 Series – Pick Up Tools

### LEAD-FRAME SUCTION CUPS

**Type of Tool:** 11-XXX-XXX

**Material:** High Purity Material

#### Application:

To pick and place the lead frames in assembly process. The material is made of High Purity Material. There are wide range sizes to cater for most lead frames.

**Delivery:** Ex-Stock ( Dia 2, 4 & 6; others TBA)

**Packing:** 10 pcs per bag. **Minimum order:** 100 pcs.

#### ESEC DIE BONDERS

Ordering Code 11-002-XXX	Dia A (mm)

## 11 Series – Pick Up Tools

### PLASTIC COLLETS FOR ESEC MACHINES

**Type of Tool:** 11-004-XXX

**Material:** 1) Body – Stainless Steel 2) Tip - Vespel (SP-1)

**Surface Treatment:** Nil

**Application:**

For small dies, transistor, opto and LED application (epoxy & eutectic). It's also use to replace carbide collets. The vespel plastic can withstands temperature up to 480°C.

**Delivery:** Ex-Stock

**Packing:** 1 pc per bag. **Minimum order:** 10 pcs.

Ordering Example: If you would like to order a tool of **OD 0.55 & I.D 0.40 mm**. Please specify the ordering code as follows: **11-005-070**

## 12 Series – Dispensing Tools

### OPTIMISING EPOXY COVERAGE FOR MATRIX® TUBE DISPENSING TOOLS

In the modern day competitive business environment, companies always trying to stay ahead of competition. One way is through the application of intelligent CAD (Computer Aided Design), which not only quickens the response to customers' request, but also helps to cut costs by applying simulation technology before the actual production process.

To capitalize on the advantage of intelligent CAD, Matrix Technologies developed a program written in 'C' programming language that would be capable of running in the AutoCAD environment for computer-aided design of die attachments and automatic generation of the NC codes. The following describes the project in more detail.

The application of epoxy to substrates in one small but critical step in the manufacturing of package IC (integrated chips) in the electronics industry. Bonding the ICs to the substrates affects the overall quality of finished products as well as the manufacturing process on the production line.

Epoxy is applied in its wet state to the required positions using a die attachment fixed to dispensing machines. The epoxy pattern is applied in the printed manner all at one through the die. This dispensing die attachment consists of a number of tubes with fine inner and outer diameter, arranged in a certain pattern for effective epoxy dispensing.

The design of the dispensing die attachment involves the selection of the tube dimension, the relative positions of the tube and tube patterns. To make it simple to use, a parametric program written in 'C' program language, running in the AutoCAD ADS environment, is developed to automate the design as much as possible. At the same time shop floor fabrication drawings, sales illustrations and the NC-code for production are also generated.

The main featured of the program are as follows:

#### 1. Programmable dialogue box data entry

The data needed for design are entered through the dialogue box. This makes the sequence of data entry less important and more users friendly. Based on the data given, the tube pattern is generated by the program. There are total of 3 basic patterns in this program and it checks the design using some establish rules, such as the minimum number of tubes required and the wall-to-wall distances of adjacent tubes.

#### 2. Generation of drawings

Sales illustration and details fabrication drawings can be plotted on the required layout automatically. Before the printout is generated, the drawing can be previewed.

#### 3. Extraction of data and NC code generation

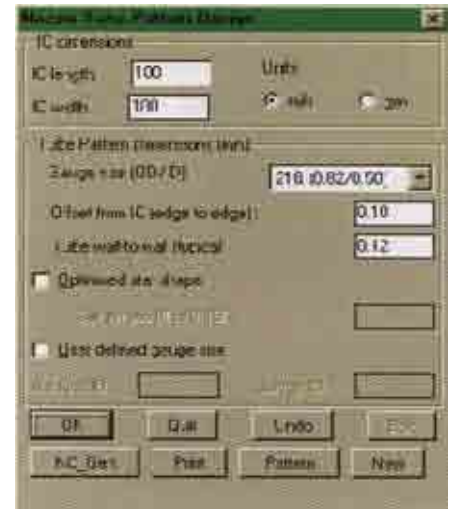

Information on the tube center coordinates can be extracted from the drawing. This information is needed on the shop floor.

#### 4. Simulation for the epoxy dispensed

A simulation of the amount and shape of the epoxy dispensed is provided in the program. It gives a 'close to actual' shape in the three-dimensional space of the dispensed epoxy using the designed die attachment under normal dispensing condition. In the simulation, areas on the boards that do not have sufficient epoxy for bonding are shown as flat surface for easy identification.

The program provides Matrix® the following benefits:

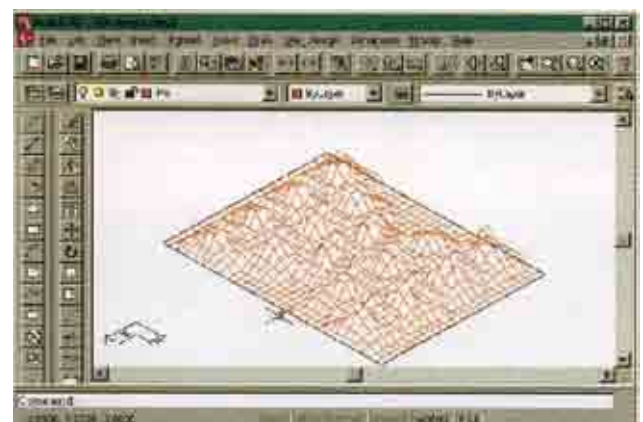

1. The repetitive and tedious task of drawing the tube pattern during the design process has been simplified or reduced significantly.
2. The company can respond rapidly to client's request, as the design can be obtain almost instantaneously.
3. The expected dispensed epoxy shape is made even before the production of attachment.

Simulation result for epoxy dispensing

## 12 Series – Dispensing Tools

### TUBE DISPENSING TOOLS

**Type of Tool:** 12-XX-XXXX

**Material:** Blanks and Tubes – Stainless Steel

**Surface Treatment:** Nil

**Application:**

For precise dotting of silver epoxy and silver paste in the die-attach process. We also provide free design to optimize the flow of epoxy to a desire print pattern.

**Delivery:** 5 - 10 workdays for standard blank.  
2 - 3 weeks for non-standard blank.

**Packing:** 1 pc per vile

## DIFFERENT TYPES OF BODY DESIGN

[illegible]

\* Please contact us for other machine models not shown above

## 12 Series – Dispensing Tools

### ESEC PEN DISPENSING ASSEMBLY AND PUMP ACCESSORIES

**Type of Tool:** XX – XXX - XXX

**Material:** -

**Surface Treatment:** Nil

#### Application:

Pens dispensing assembly is used on the ESEC 2007 programmable die-attach machine.

**Delivery:** 5-10 workdays.

**Packing:** 1 set per bag / vile.

Ordering Code	OD mm	ID mm	Hose Color
PEN DISPENSING ASSEMBLY (180-0008-XX)

## NOZZLE ADAPTOR AND NOZZLE FOR SMALL DIE

**Type of Tool:** 12-007-XXX

**Material:** Stainless Steel

**Surface Treatment:** Nil

**Application:**

These nozzles are special designed for small die to replace current standard design. They are used on the ESEC 2006 programmable die-attach machines.

**Delivery:** 5 – 10 workdays.

**Packing:** 1 pc per vile. **Minimum order:** 10 pcs.

### EPOXY NOZZLE TIP FOR SMALL DIES

**Type of Tool:** 12-076-XXX

**Material:** Aluminum.

**Surface Treatment:** Nil

#### Application:

These nozzles are special designed for small die to replace current standard design, They are used on the ASM 830/838 programmable die-attach machine.

**Delivery:** 5 – 10 workdays.

**Packing:** 1 pc per bag. ( includes O-Ring).

**Minimum order:** 10 pcs.

### 13 Series – Ejector Pins and Holders

#### NEEDLE HOLDER AND PEPPER POT (FOR ESEC 2006 DIE BONDER)

**Type of Tool:** 13 – 003 – XXX and 13- 004 - XXX

**Material:** S/S 440C

**Surface Treatment:** Pepper Port – HRC 58 & Black Chrome  
Needle Holder – HRC 58

#### Application:

These ESEC needle holders and pepper pots are primary used for ejecting of IC dies on die bonding process.

**Delivery:** 3 – 4 weeks.

**Packing:** per set. **Minimum order:** 1 set.

Range of pattern available

13 – 003 – 130 / 13 -004 - 130

## 14 Series – Wire-Bond Clamps ELECTRODE TORCH (EFO)

New development of EFO by MATRIX® Technologies improves performance of Wire-Bonding process. With new alloy material, MATRIX®'s EFO give consistent sparking effect. These EFO also can cater for fine-pitch and ultra fine-pitch bonding application. Good EFO will gives:

- Ball shape uniformity
- Consistent ball size control
- Consistent free air ball formation

Other factors need to be considered is longer life span. Longer life span means reduce your operational cost by reducing number of changing EFO. With MATRIX®'s EFO, you will get better wire-bonding result and longer life span

2 group of pictures below show us how good ball shape can be performed by MATRIX®'s EFO compare to other picture, which ball shape not consistent.

Good Ball Shape

Inconsistent Ball Shape

## 14 Series - Wire-Bond Clamps

### ELECTRODE TORCH (EFO)

**Type of Tool:** 14-010-XXX

**Material:** Crimped or Brazed Platinum Tip.

**Surface Treatment:** - NIL

**Application:**

Sparking gold wire to form a gold ball at the top of the wire.

**Delivery:** 5 - 10 work days.

**Packing:** 1 pc per bag. **Minimum order:** 10 pcs.

## 14 Series - Wire-Bond Clamps

### K&S EFO AND ACCESSORIES

**Type of Tool:** 10-XXX-XXX & 14-XXX-XXX

**Material:** Crimped or Brazed Platinum Tip

**Surface Treatment:** - NIL

**Application:**

For wire bonding process.

**Delivery:** 5 - 10 workdays

**Packing:** 1 pc per bag. **Minimum order:** 10 pcs

## 14 Series - Wire-Bond Clamps

### REFURBISH WIRE CLAMPS

#### APPLICATION

They are found in Gold Wire Bonding machines (eg. Shinkawa Machines). These high-speed machines bond gold wires from the terminal of the microchip to the lead frame. These clamps assist in pulling the gold wire as part of the feeding operation. Due to the high-speed operation, these clamps are subjected to wear and tear. Currently most customers are replacing these worn clamps with new clamps. These clamps are expensive due to the material used in the manufacturing in which is titanium.

These clamps can be re-conditioned (re-polished) to be as good as new. The important areas are flatness and in particular surface finish. Breakage of the thin gold wires occurs when the surface finishing is poor and down time of the machine is costly for the changing clamps.

#### RESULT

#### BEFORE

Photograph illustrates a worn clamp prior to the refurbishing

#### AFTER

Surface finish after a 2 stage lapping and polishing process shows a scratch free finish. This highly reflective finish is most suited for wear resistant

## 14 Series - Wire-Bond Clamps

### REFURBISH WIRE-BOND CLAMPS

#### APPLICATION

After excessive usage, copper or silver-plating of the lead frame will embed to the clamps. Some of L/F made of poor quality are having peeling of copper and silver-plating flakes. If plating flakes have been embedded to the clamps, it's too late to salvage it. Usually they are scrapped. The machines will be stopped often once the heater plates are having too much plating debris on the surface. Results in poor productivity and many hours lost in production times. These clamps can be re-conditioned by sandblast and TAC Coat; it will be extend life span of the clamps without ordering new ones.

Ordering Code	Description
14-013-010	Sandblast
14-013-020	Sandblast and Black Chrome
14-013-030	Sandblast and TAC Coat

### ta-C vs DLC Coatings

### ta-C与DLC薄膜比较

Name of Company 公司名称	Company using Conventional Technologies 使用传统技术的公司	TAC Coating 薄膜涂层
Sample Photograph 样品照片		
Coatings 涂层	DLC (Diamond Like Carbon) Coating DLC 类金刚石薄膜	ta-C (Tetrahedral Amorphous Carbon) Coating ta-C 类金刚石薄膜
Process Description 工艺描述	CVD/PVD (Conventional Technologies) 常规技术	FCVA (Filtered Cathodic Vacuum Arc) FCVA (过滤阴极真空电弧法)
Substrate 基材	Carbide Tools 硬质合金工具	
Thickness of the Coating / $\mu m$ 涂层厚度 / 微米	~ 1.5	~ 0.8
Max. Process Temperature / °C 最高加工温度 / °C	up to 800	~ 60
Deposition Rate (nm/s) 沉积速率 / nm/s	up to 0.5	up to 1.5
Physical Properties 物理性质	Hardness / 硬度	~ 13 GPa
	E-Modulus / 杨氏模量	~ 120 GPa
	Frictional Coeff. / 摩擦系数	~ 0.14
	Critical Load / 临界载荷	~ 100 mN
Applicable Substrates 适用材料/基材	Metal, ceramic, glass etc. 金属、陶瓷、玻璃等	Metal, ceramic, glass, plastic etc. 金属、陶瓷、玻璃、塑料等

ta-C (non-hydrogenated DLC) film deposited by Filtered Cathodic Vacuum Arc (FCVA) technology was found to have superior quality over tradition DLC film. ta-C film is found to be harder, smoother, more elastic and have better adhesion to the substrate material.

用过滤阴极真空电弧 (FCVA) 技术沉积的ta-C (不含氢的类金刚石) 薄膜硬度比传统的类金刚石薄膜具有更高的品质, ta-C薄膜具有高密度、更光滑的表面以及更好的均匀性和延展性, 并可以良好地黏附在基材上。

## 14 Series – Wire-Bond Clamps

### HEAT RESISTANCE TAPE

#### TEMP-R-TAPE RULON

##### PRODUCT DESCRIPTION

Temp-R-Tape RU is manufactured from 8.0 mils skived film of compounded Teflon® PTFE Rulon material, with 2.0 mils of pressure sensitive silicone adhesive. RU offers a low coefficient of friction and the high temperature stability of Teflon. RU also offers outstanding abrasion resistance, which equates to a 500 folds increase in wear resistance over PTFE in rotating bearing tests.

##### APPLICATION ADVANTAGES

- Film surface is self-lubricating
- Rulon backing offers excellent high temperature resistance
- Rulon backing is chemically inert
- Tape construction is weather resistant
- Tape construction is stable and non-toxic
- Tape is supplied with a peel off release liner
- Backing is conformable

##### PHYSICAL PROPERTIES \*

Total thickness	(inch)	.010"
Backing thickness	(inch)	.008"
Adhesive type		Silicone
Adhesion	(oz/inch width)	25
Break strength	(lbs/inch width)	15
Elongation	(%)	225
Temperature range	(°C)	-73 +260

\*All properties are typical values and should not be used for writing specifications.

Ordering Code	Description
14 – 014 – 010	Heat Resistance Tape (1" x 18 yards)
14 – 014 – 020	Heat Resistance Tape (2" x 18 yards)

##### AVAILABILITY

Factory stock is in master log form 16.5mts long x 431mm wide.  
Rolls can be slit 12mm wide – 431mm wide.

## 14 Series – Wire-Bond Clamps

### CONDUCTIVE SPOOL ASSEMBLY FOR KNS WIREBONDERS

Matrix's Conductive Spool Assembly

**Type of Tool:** 18 – 225 – 000  
**Material:** Black Delrin and S/S Spring  
**Surface Treatment:** Nil

#### Application:

Matrix's conductive spool assemblies are designed to reduce the possibility of debris contamination and heavy scratches found on the wire spool containers during mounting of new gold/copper wire spools. Most gold/copper wire suppliers will not trade in those empty spool containers that are found to have heavy scratches on the wire spool container's surface.

**Delivery:** Ex-Stock.

**Packing:** 1 set per box

Ordering Code	Description
18 – 225 – 000	Conductive Spool Assembly for K&S Wire Bonders

Note: Trade in available for existing OEM's Conductive Spool Assembly. Please contact Matrix's sales representative for more information.

## 15 Series – Custom Made Tools VARIOUS MACHINE PARTS/ACCESSORIES

**Type of Tool:** 15 – XXX – XXX

We use state of the art cad-cam and programming machines centers to meet your production demands of parts quickly and precise in small and huge variety.

To order new tooling, please send us your drawing or sample. We will assign a part number and quote you officially.

SAMPLES OF VARIOUS PRODUCTS:

Heater Blocks

Inspection Jig

Adjustable Arms Support

Plastic Gear

Heat Insulators

Hub Flange Nut

Gripper Insert

Lead Frame Gripper

Stud Top Clamp

\* Please contact us for other custom made tooling models not shown above

**Type of Tool:** 15 – XXX – XXX  
**Material:** High Speed Alloy Steel  
**Surface Treatment:** Nil

**Application:**  
For slitting of wafer mount tape during wafer mount process.

**Delivery:** 5 - 10 days  
**Packing:** 1 pc per bag / vile, **Minimum order:** 10 pcs

[illegible]

\* Please contact us for other machine models not shown above.

## 16 Series – IC Testing & Handling Tools

**Type of Tool:** 16 – 001 - XXX

**Material:** Tungsten Wire, S/S 303

**Surface Treatment:** Nil

**Application:**

These tools are primarily used to aid the IC's testing equipments.

**Delivery:** 5 – 10 days

**Packing:** 1 pc per vile, **Minimum order:** 10 pcs

### DETAIL A

## 22 Series – Ceramic Machining

### MATRIX® GLASS CERAMIC

- is **MACHINABLE** with ordinary metal working tools
- allows **FAST TURNAROUND**, no post firing required
- holds **TIGHT TOLERANCES**, up to .0005"
- withstands **HIGH TEMPERATURE**, up to 1000°C (no load)
- is **CLEAN**, no outgasing and zero porosity

#### Properties

Matrix® Glass Ceramic has continuous use of temperature of 800°C and a peak of 1000°C. Its coefficient of thermal expansion readily matches most metals and sealing glasses. It is nonwetting, exhibit zero porosity, and unlikely ductile material, won't deform. It is an excellent insulator at high voltages, various frequencies, and high temperatures. When properly baked out, it won't outgas in vacuum environments.

#### Machining

Machining tolerances are surprisingly tight, up to .0005". It can be machined to a surface finish of less 20µin., and polished to a smoothness of 0.5µin –AA. Configurations are limited only by available equipment and the experience of machinist.

#### Sealing, Joining and Metalizing

MGC can also be joined or sealed – both to itself and to other materials – in a number of ways: metalized parts can be soldered together and brazing has proven an effective method of joining the material to various metals; epoxy produces a strong joint, and sealing glass creates a vacuum tight seal. Even a straightforward mechanical joint is possible.

It can be thick metalized using metal inks, or thin film metalized by sputtering.

#### Composition

Matrix Glass Ceramic is a white, odorless, porcelain-like (in appearance) material composed of approximately 55% fluorophlogopite mica and 45% borosilicate glass. It has no known toxic effects; however, the dust created in machining can be an irritant. Good housekeeping and appropriate machining techniques can avoid this irritation. The material contains the following compounds:

	Approximate Weight %
Silicon – SiO <sub>2</sub>	46%
Magnesium – MgO	17%
Aluminium – Al <sub>2</sub> O <sub>3</sub>	16%
Potassium – K <sub>2</sub> O	10%
Boron – B <sub>2</sub> O <sub>3</sub>	7%
Fluorine – F	4%

## 22 Series – Ceramic Machining

### WIRE CLAMP JEWELS

**Type of Tool:** 22-007-XXX

**Material:** Zirconia

**Surface Treatment:** Nil

**Problem:** A high speed gold wire-bonder machine used a polish carbide clamps to position a gold wire for wire-bonding of IC's. In short period of time, the rubbing of the wire damaged the clamp faces which then caused damaged to the gold wire. This requires shutting down the machine, re-polishing the wire-clamp faces to smooth spot and re-starting the machine. The resulting downtime, wire loss from abrasions, and replacement of new clamps become costly and difficult to manage.

**Solution:** Matrix engineers, working with the OEM wire-bond machine makers proposed changing the wire-clamps to a hot isostatic pressed zirconia embedded with carbide material for electrical contacts. Significantly improving wear quality when compared to polish carbide clamps and even most other technical ceramics.

**Result:** Matrix precision fabricated the new zirconia wire clamps, and after **2 years of used** there is **NO** noticeable wear on the clamp faces, **NO** wasted material run, and virtually **NO** downtime. The end users are extremely pleased with the results and ordered more wire-bonders equipped with this new zirconia material machined by Matrix.

**Delivery :** 5 – 10 days.

**Packing :** 1 pc per vile. **Minimum order:** 2 pcs.

## 22 Series – Ceramic Machining

### MULTITEST CERAMIC INSERTS

**Type of Tool:** 22-001-XXX

**Material:** Ceramic

**Surface Treatment:** Nil

### Application:

These ceramic inserts are used for testing of IC's leads contacts. It's to replace current test sockets made of torlon, vesper plastic materials whereby they are easily worn off and provide inconsistent test results. Many reject IC's have to be re-test again using torlon & vesper materials. Ceramic inserts provide a better & 100% sure test results.

**Delivery:** 1-2 weeks.

**Packing:** 1 pc per vile. **Minimum order:** 1 pc.

**P/N: 22-001-030**

MULITITEST Ceramic Insert – 430 mils

Patent Pending

[illegible]

\* Please contact us for other machine models not shown above.

## 22 Series – Ceramic Machining

### RASCO LGS CERAMIC INSERTS

**Type of Tool:** 22-002-XXX

**Material:** Ceramic

**Surface Treatment:** Nil

#### Application:

These ceramic inserts are used for testing of IC's leads contacts. It's to replace current RASCO test sockets made of torlon, vesper plastic materials whereby they are easily worn off and provide inconsistent test results. Many reject IC's have to be re-test again using torlon & vesper materials. Ceramic inserts provide a better & 100% sure test results.

**Delivery:** 1-2 weeks.

**Packing:** 1 pc per vile. **Minimum order:** 2 pcs.

## 17 Series - New Air Spindles & Services

### AIR SPINDLES REFURBISHMENT

Matrix' Air Spindle Refurbishment Center specialize in repair and service all types of PCB CNC high speed precision drilling, routing spindle, air bearings and ball-bearings.

Air spindles received for repair are registered into the repair database. Spindle is disassembled into its major components with all critical features and tolerances inspected for damage and wear. An estimate amount for the cost of repair, including parts and services will be generated for customers approval prior to any work progress.

All air spindle components are thoroughly cleaned and assembled. Any irregularity present on the spindle will be reworked to specification. New replacement parts are assembled as OEM original parts unless otherwise specified by the customer. Polar system representation of the balancing ISO grade G 0.1 is represented to the operator on two vectormeters as well as the exact digital indication. A well balanced shaft is the pre-requisite of a quality repair. All armature shafts are balanced to less than 0.0127 Gram/mm. After balancing and reassembly, both spindle and tool to static runout, dynamic runout vibration will be checked.

### Aluminum Ceramic Porous Vacuum Chucks:

Our aluminum ceramic porous vacuum chucks are ideal for extremely thin-walled work pieces, very soft materials (i.e. rubber, foils, metal bands etc.) or use in precision optical work.

Ideally suited for extremely thin work pieces (<1mm finished Dim., depending on the material) and equally for foils down to less than 0.1mm thickness.

Due to the absence of grooves and holes work pieces are not easily deformed.

Frequently use in precision machining in the optical industry and for measuring and checking in micrometer and nanometer range. Our aluminum ceramic porous chucks must be covered entirely or the largest possible extent. Covering unused areas with foil also improves the holding force.

## 18 Series – Wafer Chucks & Services

### NEW WAFER CHUCKS

#### Aluminum porous vacuum chucks VACUDISC

- Aluminum porous vacuum chucks are ideal for extremely thin-walled work pieces, very soft materials (i.e. rubber, foils, metal bands etc.) or use in precision optical work
- Ideally suited for extremely thin work pieces (<1mm finished Dim., depending on the material) and equally for foils down to less than 0.1mm thickness.
- Due to the absence of grooves and holes work pieces are not deformed
- Frequently use in precision machining in the optical industry and for measuring and checking in micrometer and nanometer range
- Aluminum porous chucks must be covered entirely or the largest possible extent. Covering unused areas with foil also improves the holding force.

## 18 Series – Wafer Chucks & Services

### REFURBISHMENT WAFER CHUCKS

The picture shows a Typical Vacuum Chuck used in the Semi-Conductor Industries for holding Sic Wafers during the following processes:

- a) Dicing And Slicing
- b) Back Grinding
- c) Lapping And Chemo-Mechanical Polishing

These Vacuum Chucks cost between USD 1,500.00 to USD 1,800.00 each and are thrown away when it wears or when they “run out” of flatness.

Most users do not know that these Vacuum Chuck could be refurbished for at least 3 to 5 times (dependant on the depth of wear) resulting in substantial savings in their production cost.

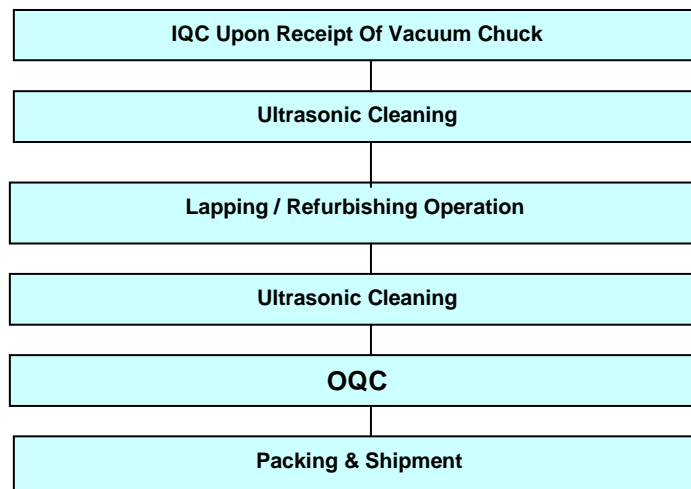

#### Customer's Requirement :

Specification comparison between a New Vacuum Chuck and a Refurbished Vacuum Chuck.

S/No	Description	Flatness	Parallelism	Surface Finishing	
				Ra micron	Rmax (Din)
1	New Vacuum Chuck	0.006mm	0.01mm	9.5	54.0
2.	Refurbished Vacuum Chuck	0.002mm	0.005mm	7.2	52.0

#### ***Typical Refurbishing Process***

##### Process Flow:

## 18 Series – Wafer Chucks & Services

### REFURBISHMENT WAFER CHUCKS

#### Results:-

Comparison between a used Vacuum Chuck and A Refurbished Vacuum Chuck.

Closed Up View Of A Used Vacuum Chuck

Closed Up View Of A Refurbished Vacuum Chuck

Area Marked	Surface Finish Measured		Flatness	Parallelism
	Ra Micron	Rmax (Din)		
A	9.5	54.0	0.015mm	0.015mm
B	11.0	69.0		

Area Marked	Surface Finish Measured		Flatness	Parallelism
	Ra Micron	Ra max (Din)		
Total	7.2	52	0.002mm	0.005mm

#### Note:

For identification purposes, usually all our refurbished chucks are engraved as R/No: 4XXXX/X. A new revision letter is added if the refurbished/overhaul is sent for 2<sup>nd</sup> or 3<sup>rd</sup> refurbished onwards (eg: R/No: 4XXXX/A, R/No: 4XXXX/B).

## **18 Series – Wafer Chucks & Services**

### **OVERHAUL WAFER CHUCKS**

For precision semiconductor wafer dicing and hybrid circuit substrate sawing, vacuum chucks in perfect condition are necessity. Vacuum chucks are manufactured to extreme limits of flatness, parallelism, thickness tolerances and surface finish. The surface condition of chucks is extremely important for wafer reference throughout the critical processing and alignment in various fabrication processes.

In dicing operation chucks are easily damaged. Harsh environment, continuous use and accidents all contribute to dicing chucks damage. Most of chucks can be restored to the original condition. Depending on size, flatness is possible to  $\frac{1}{4}$  wave, parallelism to 50 millionths of an inch, thickness tolerance usually 0.001" or tighter and surfaces polished to mirror finished when required. Vacuum Chuck could be refurbished for at least 3 to 5 times (dependant on the depth of wear) resulting in substantial savings in their production cost.

In case when the damaged is too bad, the porous material can be replaced with new one and refurbish chucks back to the customer specification.

Damaged Vacuum Chuck

## 18 Series – Wafer Chucks & Services

### WAFER CHUCK'S CALIBRATOR KIT

Portable; Easy - to - use

Kit set can be use for 5", 6", 8" & 12" wafer chucks.

#### Application:

To ensure & minimize frequent damaged of silicon wafers, wafer chucks have to be monthly or periodically calibrate & refurbished / overhauled if the warped of the wafer chuck is more than 5 microns. Deep scratches & dents found on the wafer chuck surface may also cause damage to the silicon wafers during sawing operation.

**Delivery:** Ex-Stock

**Packing:** One Aluminum Carry Tool Case.

#### Wafer Chuck's Calibrator Kit Consists:

18-211-010	Gage Holder	1
18-211-050	Precision Granite Table	1
18-211-110	Mitutoyo Dial Gage – .001mm	1
18-211-120	Aluminum Carry Case	1

\* Total Weight – 17.1 kg

Wafer Chuck's Calibrator Kit sold as a set  
**18-211-000**

Inspection of wafer chuck's parallelism  
**18-211-050**

Inspection of wafer chuck's flatness  
**18-211-010**

## 18 Series – Nozzle Assembly

### SPRAY NOZZLE ASSEMBLY / MACHINE BELLOWS

#### Spray Nozzle Assembly

Matrix spray nozzle assembly provides accurate spray placement onto the blade during die sawing. To fully optimize the performance of nozzle we recommended to maximize cycle speed, utilized Pulse Wide Modulated flow control, validate spray operation and implement other control methods. We can help to evaluate the various control options and choose the solution that will best meet your application requirement.

Ordering Code	M/C Mode	Reference
18 – 222– 000	DAD6340	LJ TZ – 910012 - 2

#### Machine Bellows

Fabric bellows provides maximum protection in rugged industrial environment and prevent foreign particles from entering the hydraulic or pneumatic systems of the equipment inside.

## 18 Series – Wafer Chucks & Services

### WHEEL HUB MOUNT ASSEMBLIES.

**Type of Tool:** 18-XXX-XXX

**Material:** S/S 304

**Surface Treatment:** Nil

#### Application:

Wheel hub assemblies are primarily used for mounting of dicing saw blades. Each new wheel hub assemblies are balanced on our new PASIO 5 balancing machine. All balanced values are recorded so that they can be retrieved again later point of time. Through the air automatic positioning to the balance points, our PASIO 5 enables an exact and rapid correction unbalance. An un-distribution of the mass is called unbalance. It causes centrifugal force, vibration and noise during rotation, which become stronger and more uncomfortably noticeable at higher speeds.

**Delivery:** 3-4 weeks.

**Packing:** 1 set per box. **Minimum order:** 1 set.

Ordering Code	Description	M/C Model

Hub mount nut can be purchase individually, please contact us for other machine models not shown above.

## Refurbish PCB Boards SEMICONDUCTOR PACKAGING EQUIPMENT AND OTHERS

MATRIX® PCB Refurbishment Center offers a revolutionary PC Boards refurbishing service for semiconductor FOL machines. These include die bonders, wire bonders and die saw machines. By adopting best practices, we strive to help you save costs and improve machines' uptime.

The Center's refurbishment process is divided into 3 phases comprising 7 stages with individual technicians specializing in each repair stage. This minimizes unnecessary movement while maximizing productivity and expertise.

### HOW YOU BENEFIT

#### ◆ **Guaranteed Delivery Time**

With this guarantee, you can organize and plan your production schedule better.

#### ◆ **Shorter Repair Time**

Through specialization and improved efficiency, this shorter repair time will translate into better turn-around time for your machines.

#### ◆ **Value for Money**

You will get better value for money through lower repair cost and avoid costly purchases of replacement boards from OEMs.

#### ◆ **Warranty**

We offer 6 months' warranty on all parts and labour associated with each repair job. This will put your mind at ease. All our refurbish boards are individually identify and tag with a SR# Number. Example: SR# 400001

SR# 400001

Board's Identification Number

## Multilayer Shorts Locator – Toneohm 950

# Multilayer Shorts Locator

*Multilayer shorts location made simple  
on bare and assembled PCBs*

**Toneohm 950**

- Ideal for assembly and fabrication*
- Pinpoints virtually all types of PCB shorts*
- Handles all PCB technologies*
- Finds power to ground plane shorts*

## PCB Fault Locator – PLF 780

**PFL780**  
**PCB Fault Locator**

*Successful Faultfinding  
on assembled PCBs*

*Effective in Production & Manufacturing*

*Proven in Service & Repair*

*Ideal for CEMs making  
small to medium batches*

## PCB Repair Test System – GRS 500

Prototypes, short production runs,  
new product launches.  
Deliver your product to market  
on time and on budget

*PCB repair test system*  
**GRS500**

- Increase prototype yields*
- Designed for short series production*
- Fast programming from data*
- Low cost of ownership*

## 21 Series - New PCB Boards

### RETROFIT KIT MONITOR CTX (VME2/VME1/STD)

### PROGRAMMABLE RGB TO VGA VIDEO SCAN CONVERTER

#### Features

- Programmable to accept wide range of RGB signals formats.
- Input H-Sync and V-Sync can be as low as 15Khz and 50 Hz respectively.
- 24bit true color VGA output up to 800 x 600 pixels.
- VGA output directly compatible with multiscan VGA monitors.
- Easy installation without the need to alter any part of the equipment.
- Wide input power supply range 8V-30V
- Lower consumption <3W

#### Application

- Upgrading of semiconductor equipments, CNC machines, medical instruments, etc.
- VME2 is VME card with two video format conversion channels
- VME1 is VME card with single video format conversion channels
- VME-ST is standalone version with single video format conversion channels.

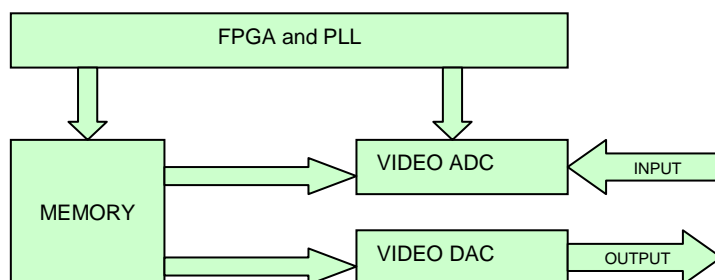

#### Description

VME is a high-quality video scan converter to convert legacy video signals including analog RGB, CGA and EGA to VGA. It uses high-speed video ADC, DAC and PLL to convert input video signals without losing fidelity. It also has a board power supply so that wide range of DC supply can be used directly. The converter is extremely easy to use without any intervention of the host system.

The VME2 is specially designed for ESEC 3006 Wirebonder and ESEC 2006 Diebonder. The VME-OT is the customized version that can be programmed to convert other type of video signal to VGA signal upon request. VME-OT can accept composite sync, sync-on-green and separate H-sync and V-sync. With the proprietary sync separation technology, video sync signals can be recovered from incomplete composite syncs.

23 - 001 - 000

## Desktop Robot Series DR8000

**New Product Launch**

A multi-purpose, highly versatile desktop size machine to support small-volume, high-quality work cell production.

Comes In : 4-axes control, 3-axes control, and 2-axes control

- $\pm 0.01$  mm repeatable positioning accuracy (X,Y axis)
- Software available for easy operation
- PC based, easy program teaching, loading / saving for new products
- Easy programs selection

## 23 Series – Desktop Robot

23 - 001 - 000

## Desktop Robot Series DR8000

### PRODUCT DESCRIPTION

The SINTEC Desktop Robot Series DR8000 has a 300 by 320 mm range of operation. This robot is available to meet your process requirements in four different configurations offering: 2,3, 4 and Rotary axes, The simultaneous control over all axes provides for 3D linear and arc interpolation that are required for complicated dispensing or inspection processes.

This unit is fully compliant with most industrial safety guidelines. Programming accessories, dispensing systems, vision systems, screw driving, PCB routing integration packages with their respective mounting hardware are sold separately. SINTEC has special application specific software that simplifies programming of the robot.

### PRODUCT FEATURES

- $\pm 0.01$  mm repeatable positioning accuracy (X,Y axis)
- Software available for easy operation
- PC based ,easy program teaching, loading / saving for new products
- Easy programs selection
- Integrated solution -plug and play
- Low cost operation and ownership
- Compact size
- Application specific software
- Wide variety of mounting hardware available

### APPLICATIONS (Optional)

- Vision Inspection
- Glue Dispensing
- PCB Routing
- Screw Driving
- Soldering

\*1. When the tool is 1.5kg or less. Set the speed based on the use conditions. \*2.When the work place is 6kg or less. Set the speed based on the use conditions. \*3 .Speed can be set . May not reach the specified value depending on the travel distance. \*4 Conditions: temperature 20 +/-0.2°C measured from one direction

### Control Specification

Drive method	5-phase pulse motor (open loop control)
Movement method	PC base control
Control axis count	Maximum of 4 axes (simultaneous control of all axes possible)
Speed control	Maximum 7000 pps
Programming method	Through simple and intuitive Graphic User Interface (GUI)
Program capacity	Maximum of 1000++ work programs
Teaching method	Direct teaching from GUI program using icons, toolbars, taskbars, & other point & click functions
Point data storage capacity	9999
Internal PC function	Programming method : Boolean ...
User I/O points	Up to 36 I/O points (Optional)
Serial I/F	2 USB 2.0

**23 Series Semi – Auto Die Sorter Machine**  
23 - 002 - 000

## Semi-Auto Die Sorter Machine Series DS8000

**New Product Launch**

A highly precise and reliable Die Sorter used for delicately picking up of small dies from Wafer / Film Frame after 'Die Sawing' and sort them into Standard trays, waffle paks, gel paks or other packaging medias.

The Semi-Automated Die Sorter is competitively priced to help our Valued Customers invest in automation.

- The high speed Pick and Place is Servo ball screw driven to ensure smooth and accurate positional accuracy and repeatability
- User- friendly Software with simple push buttons on the Control Panel for ease of operation
- PC based control with all the necessary sensing needs
- Our proprietary SINTEC Vision captures all dies X/Y and Theta data and the Stepper ball screw driven Wafer Table will do the necessary positional correction prior to every pick up.

Wafer mounted on the

## 23 Series Semi – Auto Die Sorter Machine

23 - 002 - 000

### **PRODUCT DESCRIPTION**

The SINTEC Semi Auto Die Sorter Series DS8000 is designed with highly advanced technologies but yet competitively priced to handle 6 and 8 inches wafers. A motorized Wafer expander stretches the UV Tape to a predetermined amount to allow positive vision capture and dies pick up. Dies position will be captured by means of our proprietary vision system and will be feedback to the sturdy XY Theta table. The XY Theta table will then do the necessary positional correction to center the dies to ensure positive pick up of the dies every time.

The vision system is also capable of identifying ink dots to distinguish between 'good' and 'bad' dies. SINTEC can also provide special wafer mapping software that reads dies information directly to tell the machine which dies to be pick and sorted.

This machine is fully compliant with most industrial safety guidelines.

### **PRODUCT FEATURES**

- $\pm 0.050$  mm repeatable placement accuracy (X,Y axis)
- Machine is easy to set up and operate
- PC based control with all the necessary safety interlock sensors
- Easy programs set-up, selection and Production Lot Change
- Integrated solution -plug and play
- Low cost operation and ownership
- Compact size

### **OPTIONAL OUTPUT CONFIGURATIONS**

- Auto Waffle Pak Tray Stacker
- Gel Pak
- JEDEC/ EIAJ Trays
- Tape and Reel
- Bins or Tubes

## 23 Series Semi – Auto Die Sorter Machine

23 - 002 - 000

### Unit Specifications

#### ◆ Material Specification

- |                       |                                                |
|-----------------------|------------------------------------------------|
| □ Die Sizes           | : 1.0 x 1.0mm to 10.0 x 10.0 mm                |
| □ Wafer size          | : 6 inches and 8 inches Wafers on FLEX Frame   |
| □ Trays Configuration | : 2 x 2in or 4 x 4in Waffle Packs or GEL Packs |
- (Other packages and tray types and sizes please consult SINTEC )

#### ◆ Load / Unload Configuration

- |                |                                            |
|----------------|--------------------------------------------|
| □ Wafer Frames | : Manual Load / Unload of Wafer Frames     |
| □ Devices      | : Continuous Load / Unload of Waffle Packs |

#### ◆ Vision Specification

- |                       |                                        |
|-----------------------|----------------------------------------|
| □ Camera type         | : 256 Grey level (Standard Resolution) |
| □ Resolution          | : 640 pixels x 480 pixels              |
| □ Positional Accuracy | : $\pm \frac{1}{2}$ pixels             |
| □ Die alignment       |                                        |
| □ Ink Dot recognition |                                        |

#### ◆ Pick and Place Specification

- |                      |                       |
|----------------------|-----------------------|
| □ Bond force         | : 30 to 1000g         |
| □ Placement Accuracy | : $\pm 50\mu\text{m}$ |
| □ Die Accuracy       | : $\pm 3^\circ$       |

### Performance Specification

- |                    |   |            |
|--------------------|---|------------|
| □ MTBA             | > | 60 min     |
| □ MTBF             | > | 500 hours  |
| □ MTTR             | < | 1 hour     |
| □ MTTA             | < | 5 min      |
| □ Machine UPH      | ~ | 4000       |
| □ System down time | < | 2%         |
| □ Conversion time  | < | 30 minutes |

#### Note:

Machine performance data may differ from different customers subjected to application studies due to materials and processes variation beyond our control.

## LED Illuminator

**Type of tool:** 23 - 004 - 000

**Material:** NA

**Surface Treatment:** Nil

### Application:

Our new LED's ring lamp primary used for ESEC die bonders & microscope works. Presently customers are using original circular fluorescent lamp and experiencing very poor image recognition and causes picking up many wrong dies. With this new LED's ring lamp, the PRS of the die bonding machine can clearly recognized and pick the good die more accurately than ever before. One customer already placed a blanket order of 35 sets to replace their existing circular fluorescent lamps after numerous of test compared with our new LED's ring lamp.

### Specification:

- 60 pcs LED
- Colour temperature 6400K
- 20K life span
- Power: 90 – 250V
- Plastic LED casing
- Opening 62 mm
- Built-In brightness control knob

Ordering Code	Description	Reference
23 – 004 – 000	LED Illuminator	Model: DGS-RL60

- Please contact us for other models not shown above.

## 23 Series - Peel Force Tester

23 - 005 - 000

A highly reliable and accurate table top tester for checking the peel force of cover to carrier tapes adhesion after Tape and Reel process.

### Key Features:

- 'Built-in' PC Control with user-friendly GUI and Statistical Software Package
- Design in compliance with EIA-481 Standard and rugged construction
- Simple Calibration procedure with *optional ISO traceable weights set*
- Test result data logging and storage for future reference

## 23 Series - Peel Force Tester

23 - 005 - 000

### ■ Specification

#### Tester

□ Peel Force Range	:	0 ~ 500gf
□ Force Gauge Accuracy	:	±0.1gf
□ Tape width	:	8 ~ 80 mm
□ Pull Speed	:	100 ~ 300mm/min
□ Peeling Angle	:	165 ~ 180 degrees
□ Pull Length	:	Approx. 200 mm

#### Force Data Software

- Force and Length range can be software settable
- Upper and Lower Limit can be set to define Pass / Fail
- Auto capture and display Max / Min / Average readings
- Results can be printed directly or saved for future reference

#### Force Sensor

□ Units	:	N / gf / oz Selectable
□ Resolution	:	0.001N
□ Sampling Speed	:	Maximum 1000 times / sec
□ Display Update	:	10 times / sec
□ Capacity	:	Up to 5N

#### Utilities

□ Power Supply	:	220VAC / 50Hz

## 23 Series - Reel Inspection System

23 - 006 - 000

## Reel Inspection System Series RI8000

### POST TAPING INSPECTION

A high speed and highly reliable 'Post Taping' Vision Inspection System incorporating optional motorized zoom that can perform Post Seal Check, Mark and Gross 2D Lead Inspection of 2 or 4-sided 'Gull Wing' devices. It comes with a reject identification ink marker that will identify the locations of rejects for easy rework or verification.

The Fully Automatic Reel Inspection System is competitively priced to help our Valued Customers invest in automation.

- The high speed Reel Indexing mechanism is pulse motor driven to ensure smooth, fast and accurate indexing of the carrier tape
- User- friendly Software with simple push buttons on the LCD Display Panel for ease of operation
- PC based control with all the necessary sensing needs
- Our proprietary SINTEC Vision System will inspect all devices for Seal Quality, Pin 1, Mark and Gross Lead rejects to ensure only Good reels are shipped to Customers.

Standalone Part Counting Machine  
(Without Vision System)

(Model: PCM8000)

## **23 Series - Reel Inspection System**

23 - 006 - 000

### **PRODUCT DESCRIPTION**

The SINTEC Reel Inspection System Series RIS8000 is designed with highly advanced technologies but yet competitively priced to handle all 2 or 4 sided 'Gull Wing' devices. Carrier Reels after Taping of IC Devices are presented to the machine for Post Taping Check prior to shipment. The reels shall be indexed through the machine one pitch at a time for the vision system to capture and process the inspection results. Upon receiving the results as a reject, the reject marker shall mark on the reject location.

The Vision system is capable of inspecting Post Seal Quality, Pin 1 orientation, Mark and Gross Lead defects. SINTEC Reel Inspection System uses a high speed, highly reliable pulse motor driven indexing mechanism to feed the carrier tape through the vision module.

This machine is fully compliant with most industrial safety guidelines.

### **PRODUCT FEATURES**

- Machine is easy to set up and operate
- PC based control with all the necessary safety interlock sensors
- Easy programs set-up and selection
- Integrated solution -plug and play
- Low cost operation and ownership
- Compact in size

### **OPTIONAL ITEMS**

- Motorized Zoom feature

## 23 Series - Reel Inspection System

23 - 006 - 000

Accuracy	25um	10um	25um	20um
	1.0mil	0.4mil	1.0mil	0.8mil
Repeatability (3 sigma)	25um	10um	25um	20um
	1.0mil	0.4mil	1.0mil	0.8mil
Filed of view = 25mm X 18mm. Typically TSSOP40/48/56L, SOIC20-28L packages				
	spread	spacing	skew	tweeze
Accuracy	38um	17um	38um	35um
	1.5mil	0.7mil	1.5mil	1.4mil
Repeatability (3 sigma)	38um	17um	38um	35um
	1.5mil	0.7mil	1.5mil	1.4mil

### Performance Specification

❑ MTBA	>	60 min
❑ MTBF	>	1000 hours
❑ MTTR	<	1 hour
❑ MTTA	<	1 min
❑ Machine UPH	~	Up to 10000 (depending on package type)
❑ System down time	<	2%
❑ Conversion time	<	30 minutes

**Note:**

Machine performance data may differ from different customers subjected to application studies due to materials and processes variation beyond our control.

The Specifications for accuracies and repeatability may differ subjected to qualities and conditions of Cover and Carrier Tapes.

## 23 Series - Reel Inspection System

23 - 006 - 000

### External Dimensions

**Safety Notice:** For your safety , please read the Instruction manual carefully before using the product. Specifications and appearance are subject to change without prior notice

## 23 Series – Semi-conductor Dicing Cleaning System

23 - 007 - 000

# 最佳效能 頂尖科技

## Optimum Efficacy & Topnotch-Tech

**CL-6801 / 1201 半導體切割用清洗機**  
CL-6801 / 1201 Semi-conductor Dicing Cleaning System

專業晶圓製程的高技術指標『CL-6801 / 1201 半導體切割用清洗機』，以邏輯式微處理器控制，可選擇高壓水或利用二流體的霧化氣加上微粒水珠，達成剷除晶圓切割後，表面及切割道內所殘留之磨屑，提供晶圓切割製程中關鍵的清洗效果。高效率、多功能，可配合企業不同生產及產品需求，創造出清洗製程之最佳效能。

**CL-6801 / 1201 Semi-conductor Dicing Cleaning System - Hi-Tech target of the professional wafer proceeding.**

CL-6801 / 1201 Semi-conductor Dicing Cleaning System is controlled by logical microprocessor, which applies high-pressure water or gas of atomizing nozzle with tiny glob to remove residue in the micro cutting channel after wafer diced. Which provides the important cleaning purpose from the wafer proceeding. With high efficacy and multi-functions - It could meet the diverse product needs of customers and create the best efficiency from cleaning procedure.

## 23 Series – Semi-conductor Dicing Cleaning System

23 - 007 - 000

### ● Specification

● 規格 Specification	CL-6801 (T)	CL-1201 (T)
工作物尺寸 Work-piece Size (mm)	6"~8"	6"~12"
適用 Frame 尺寸 Applicable Tape Frame (mm)	2-6 2-6-1 2-8-1	2-6-1 2-8-1 2-10-1 2-12-1
高壓淨水壓力 Pressure Pump Unit (Mpa)	2~12	2~12
真空吸盤(供電)轉數 Table Rotation Speed (mm/rpm)	0~3000	0~3000
效能 Utilities		
電源供應 Power Supply	AC110 / 220 V	AC110 / 220 V
氣壓量 Air Pressure (kgf/cm <sup>2</sup> +G)	6	6
最大氣流量 Air Flow Rate (L/min(ANR))	Max. 100	Max. 150
水壓量 Water Pressure (kgf/cm <sup>2</sup> L)	2~3	2~3
最大水流量 Water Flow Rate (L/min)	Max. 10	Max. 15
氮氣壓力 N <sup>2</sup> Pressure (kgf/cm <sup>2</sup> +G)	4~5	4~5
最大氮氣流量 N <sup>2</sup> Flow Rate (L/min(ANR))	Max. 100	Max. 150
最小吸風量 Duct Required Suction (m <sup>3</sup> /min)	Min. 5.0	Min. 5.0
機台尺寸 Machine Size (mm)	850 x 450 x 1200	850 x 550 x 1200
機台重量 Machine Mass (kg)	90	120

★ T 系列機種為二流體與高壓水柱共存系統，非 T 系列機種時，二流體為標準配備。

### ● 應用產品 Applicative products

切割產品：晶圓 / 玻璃 / 機板 / 陶瓷類 …等等。

Dicing/Cuting Production: Wafer / Glass / Substrate / Ceramics...etc.

### ● 選配項目 Options

- ◎ 光閘安全感應器 Door Safty Sensor
- ◎ 不斷電系統 UPS
- ◎ 其他配備需求 Other Requested Accessories
- ◎ 清洗劑泵浦 Purger Pump
- ◎ 其他程式功能 Other Requested Software

**Used Equipment Sales****SEMICONDUCTOR PACKAGING EQUIPMENT AND OTHERS**

MATRIX®'s market knowledge combined with our expertise in the semiconductor industry will enhance our unique position to assist our customers in their equipment needs.

By utilizing our service, you are tapping on to our one-stop-shop that provides a source for the equipment, technical expertise, installation & upgrading services, and follow-through service. All these come with the knowledge that MATRIX® has an outstanding reputation in the industry for quality products and excellent customer service.

MATRIX® has built up lasting relationships with many customers and brokers so that we can provide referrals if we do not have your specific requirement in stock.

**Our Capabilities:**

- “All-In-One” capability: Sales, Service and Training
- Equipment available in “As Is” or “Refurbished” condition
- Strong Relationships with Customers and Brokers

### SEMICONDUCTOR PACKAGING EQUIPMENT AND OTHERS

#### Matrix Lot # 4021

#### Inline Automated Fluid Dispensing System

**Manufacturer** : ASYMTEK  
**Model** : A-618C  
**Year of Manufacture** : 1995

#### Product Spec

Serial Number : 6033  
 Voltage : 240 VAC  
 Dimension  
 Length : 1.15 m  
 Width : 1.30 m  
 Height : 1.30 m  
 Weight :  $\pm 300$  kg  
 Drive System  
 X-Y Speed : 0-508 mm/s (0-20 in./s).  
 Repeatability : 0.025 mm (0.001 in.)  
 Positional Resolution: 0.025 (0.001 in.)  
 Computer  
 Pentium based PC  
 Speed of Conveyor: Programmable up to 25.4 cm/s (10 in./s)  
 Conveyor Compatibility: SMEMA  
 Board Carrier Flow Direction: Filed Programmable, right to left or left to right

#### Additional Information:

Ideal for medium volume production. Can be configured to dispense a wide variety of fluids, from gasketing material to solder mask and solder paste. Easy-to-use, flexible, DOS-based Fluidmove<sup>®</sup> software for CAD download or move-teach programming. Vision system to optimized programming accuracy. Needle sensor for automatic compensation of XYZ changes.

#### Sale Information

Asking Price : USD 12,000.00 (Negotiable)  
 Payment Term : 30% down payment upon confirmation. Balance 70% must be made and machine collect within 7 days. Otherwise, down payment will be forfeited.  
 Validity : 2 Weeks  
 Shipment : Ex Factory  
 Delivery : Ex Stock

#### Condition, Warranties and Location

Condition : Not tested (Sold as is without installation )  
 Manufacturer warranty : None  
 Seller's warranty : None  
 Location of Equipment : Asia

#### Note:

This equipment information supersedes all former information. Changes of any kinds or printing errors in prices and technical do not justified claims.

Last update : 1 January 2005

Enhance Lead-time Reduction; System and OEM relationships are in place to facilitate Concurrent Manufacturing. A network of supplier is working with MATRIX to meet stringent Quality Control and Supply demands.

Heater Assembly

EFO Accessories Assembly

Case Fixture Assembly

Leadframe Gripper Assembly

Heater Block Assembly
